

PARKLANE

We Give Your Data Center The Silent Treatment.

Parklane designs, manufactures, and implements fully customized noise-mitigation solutions, engineered to meet the evolving needs of the mission critical sector.

Don't let facility noise slow you down

Rapid data center development has put pressure on facility owners, operators, and other key project stakeholders to meet evolving legislation quickly. We provide custom, turnkey solutions to help compress your construction schedule and get you up and running and in compliance faster.

Bridging the gap between communities and data center developers with our bespoke integrated solutions

New and retrofit attenuation solutions for standby power systems

Air cooled chiller attenuation packages

Modular acoustic roof screening

Grade mounted acoustic barriers

RTU attenuation packages

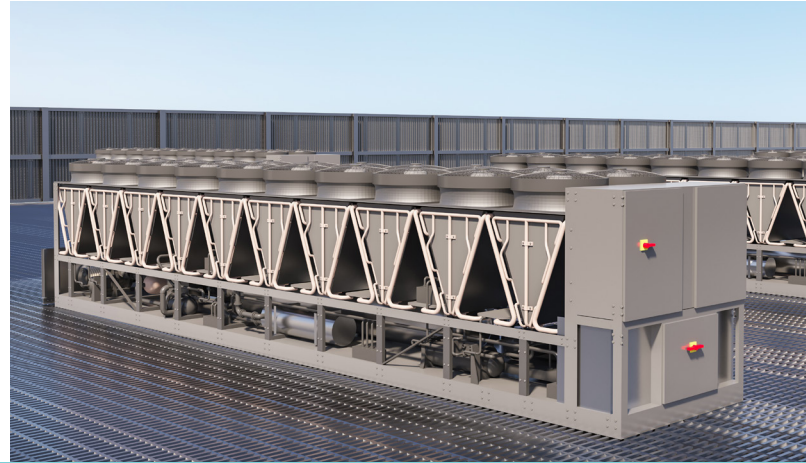

Custom air handler attenuation packages

Custom silencers for general building ventilation

At-Source Attenuation For Air Cooled Chillers

OEM-Agnostic Design

Parklane has developed custom solutions integrating with all major ACC OEMs by optimizing acoustic performance, structural adaptability, and subcomponent serviceability.

Discharge Plenum Silencer

Aero-acoustically optimized for cooling and condensing fans, this solution effectively attenuates discharge noise while integrating plenum access for seamless equipment servicing.

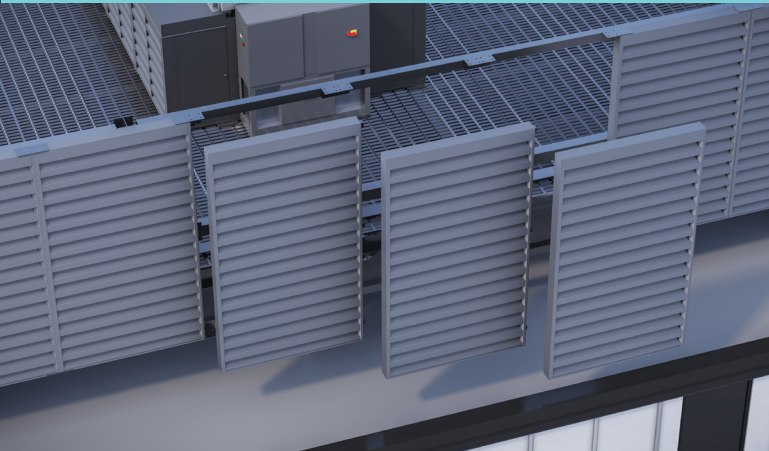

Hinged Inlet Louvers

Designed for medium static pressure systems and requiring minimal footprint, this solution features hinged french door access for reliable and efficient noise control.

Modular Acoustic Roof Screening

Complete Aesthetic Flexibility

Parklane's unique barrier framework design allows for the integration of virtually any architectural cladding system commercially available.

Multiple Mounting Options

Engineered to work within site-specific structural challenges with three available mounting options: clip-mounted, stub-mounted, and gravity restrained.

Acoustic Attenuation Performance

With both louvered and solid acoustic options, Parklane offers several performance options for both Transmission Loss and Wall Absorption to meet site requirements. All tested in accordance **ASTM E90 and C423 standards.**

How Parklane mitigates risk and offers support at every stage

Preplanning

Coordinating with architects and consulting engineers during the permitting or design phase to ensure noise solutions address all compliance requirements while integrating seamlessly into the building design.

Construction

Modular system design combined with Parklane's complete turnkey delivery model reduces supply chain risk and helps compress construction schedules.

Post Commissioning

For facilities already in operation, we work within all known building constraints to offer a full range of retrofit solutions. Performance guaranteed.

The Parklane Advantage

Project Certainty

Our comprehensive assessment process is designed to address a project's full scope to avoid unexpected delays or logistical issues.

Integrated Design Service

Our multi-disciplinary engineering service ensures all design constraints are addressed, resulting in a seamlessly integrated noise control solution.

Reliable Manufacturing

To improve efficiency and mitigate the risk of onsite rework, we manufacture and factory-assemble components in-house to your team's exact technical specifications.

Cost Control

Our detailed project delivery process allows us to conduct a clear cost-risk assessment to ensure your project is completed on time and on budget.

Noise Control Simplified

We're dedicated to your success.
Whether working with facility owners,
design stakeholders, or contractors,
we're committed to providing
effective solutions to the most
complex environmental noise
challenges—no matter the size or
scope.
